

**Revolutionizing  
the way we learn.**

**A 10-week online program for K12  
educators and leaders worldwide.**

**[www.thenextlearnerspace.org](http://www.thenextlearnerspace.org)**

# Creating the Future of Education

The learning journey begins with a plan that situates the learner at the center of five integrated guiding principles: **Self, Nature, Community, Technology, and Leadership.**

The **10-week online and interactive 90-minute sessions** highlights a series of skills and competencies that drive multi-modal learning leading to new knowledge and greater confidence.

**Weekly 90-minute video Learning Modules** – Where a cohort of like-hearted educational leaders will share their thinking and leading practice.

**Experiential Learning** – A unique and inspiring learning journey to experience what the future of education could look like, bringing a sense of wonder to your current teaching practice.

**Innovation Lab** – Collaborate with peers and experts from all over the world in developing innovative educational projects.

## Program Details

### CONNECTING

In week 1 we explore the conditions for community and culture with a focus on learning about each other and connecting with each other through a series of common shared experiences.

This sets the stage for a more solid collaboration as well as crystalizing each step of the learning journey together.

### DISCOVERY

Learning more about ourselves, our dreams aspirations along with the preferred future we would like to create. This deeper understanding of self and other assists in deepening the foundation for learning and growth. In addition, it helps to map the collaborative journey of co-creation together.

### SENSING

Understanding our current state and how we arrived here is an essential step in co-creating a preferred future together. Nature and the eco-system we operate in is an essential component in the journey that begins to view and connect the five areas of focus, self, community, nature technology and leadership. In week 3 we begin to create the space for exploring the vexing challenges that are important to the group and begin to shape our projects.

### THE JOURNEY

Technology has a profound impact on modern life, both positive and negative. By better understanding the technological forces at play, how might we best leverage technology as an enabler to accelerate our aspirations as we move to a preferred future?

# Program Details

## 5 THE FUTURE

In week 5 we take what we have learned to date and begin to narrow the scope on some social enterprise education projects that the various teams are aligned and passionate about. Week 5 is the platform for developing the various projects.

## 6 DESIGNING

Parsing the project ideas and organizing teams around the various projects for them to take shape is a function of leadership. In week 6 we bring an array of leadership tools and design methods to assist in lifting the projects.

## 7 PROTOTYPING

Prototyping is an important step in the design process where ideas move from the paper to an actual form. This week, the projects begin to take shape in concrete form.

## 8 ADVANCING

This week provides a dedicated space for collaboration on the various projects, feedback, and iteration along with refining the projects are included in this week's work.

## 9 FEATURING

In week 9 we showcase the projects to each other, share thoughts on our ideas, and draw learnings from the process. What worked well? What was Tricky? And what might we do different next time, given the opportunity.

## 10 NEXT

Week 10 is a choice point, which of the presentations do we want to advance into the world and how might we go about this. In week 10, we take the time to celebrate each others accomplishments for a job well done!
